## Monthly Commentary

### What happened in markets?

February was another month of strong gains across asset markets, with solid returns from company shares, bonds and alternative asset classes. Economic data remained robust, with activity indicators remaining positive and inflation readings continuing to fall in the major economies, supporting forecasts of further interest rate cuts from the US and UK central banks this year. UK and US government bonds returned 2.4% and 1.8% respectively, in sterling terms.

Strong headline level returns for many stock markets masked a continued rotation under the surface, as investors continued to favour buying shares in companies in non-technology related areas of the market, such as energy and materials. Investors continue to question the extent which the large sums being spent on artificial intelligence (AI) infrastructure will lead to a profitable return, whilst fears over the impact of AI spread to many knowledge-intensive sectors, with sharp falls in a number of software and professional services companies.

Whilst US stocks returned 1.3% in sterling terms, in US dollar terms they actually fell modestly in value, dragged down by lacklustre returns from the large technology companies which account for a significant proportion of the value of the overall market. The equal-weighted US equity index (where each company in the index has equal importance, rather than being weighted according to its market value) delivered a stronger return.

The sector rotation was particularly positive for UK stocks, which returned 7% over the month. Even more notable was Japan, where the clear victory of Prime Minister Takaichi in the general election reinforced recent positive stock market performance, as markets continued to welcome her pro-growth policies. Japanese equities returned 10.8% over the month, again in sterling terms.

### What is the outlook?

At the time of writing in early March, the war in the Middle East had just commenced. We have written separately on this topic, highlighting the importance of not reacting impulsively to these events. The situation remains highly fluid and fast-moving and, as ever, Shackleton's investment team will continue to manage portfolios actively – controlling risk exposures, while remaining alert to opportunities that may arise amid the market volatility.

Our core thesis remains that an environment of decent economic momentum and company earnings growth, falling inflation and further interest rate cuts in the US is a positive one for global risk assets such as company shares. Notwithstanding that backdrop, markets have enjoyed a strong start to the year, and a more moderate pace of gains is perhaps likely in the near term. A key risk is that inflation proves 'stickier' than markets currently believe, which would undermine the prospects for interest rate cuts in the US and UK this year.

## Why Invest?

### Simplicity

A single fund to meet your investment needs

### Diversification

Access a range of asset classes, investment styles and geographies

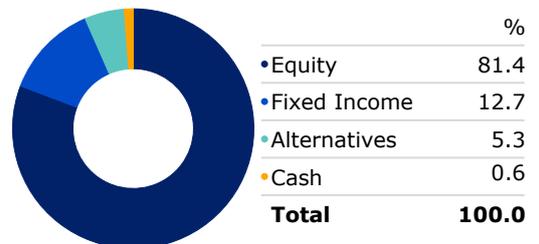

### Actively managed

The fund will change as market conditions and the economic cycle evolves

### Expertise

The managers share 60 years investment experience

Valu-Trac Administration Services, a trading name of Valu-Trac Investment Management Limited, is the authorised corporate director (ACD) and is authorised and regulated by the Financial Conduct Authority. Financial Services Register Number 145168. Shackleton Advisers Limited is the investment manager for the VT Esprit range of funds. Shackleton is a trading style of Shackleton Advisers Limited, which is authorised and regulated by the Financial Conduct Authority. FCA Number 163291. Shackleton Advisers Limited is a limited company registered in England and Wales, with VAT number 04129116. The company's registered address is 40 Gracechurch Street, London EC3V 0BT.

**12 Month yield:** The amount of income generated by the fund in the last 12 months expressed as a percentage of the previous month end price. Where distribution status is shown as 'Acc' this yield is automatically reinvested into the fund but may still generate a liability to income tax depending on individual circumstances.

**OCF:** The Ongoing Charges Figure (OCF) is the overall cost shown as a percentage of the value of the assets of the fund. It is made up of the Annual Management Charge (AMC), the underlying fund charges, and other operating costs.

Performance figures are net of the underlying fund charges and gross of adviser and platform charges. Deduction of these fees and charges will impact on the performance shown.
