\*Independently risk-rated and assessed as Medium Risk

## FUND ADVISER'S REPORT

### A healthy correction in the share prices of US and Canadian yield cos has taken root in the near term

The portfolio started the New Year on solid footing and delivered a 1.37% gain in January (C Accumulation GBP units). Returns from underlying portfolio companies were more diverse when compared with the experience of recent months during which period the cohort of US and Canadian yield cos were responsible for driving performance. While Atlantica Sustainable Infrastructure continued to perform well and was among the top contributors, several yield co exposures including Hannon Armstrong Sustainable Infrastructure and Brookfield Renewables provided headwinds to overall returns.

The Adviser believes the disparity may signal that the strong momentum trade – most evident in the broader clean energy sector within North American equity markets – is starting to abate. Sizeable inflows received by several clean energy-focused ETFs have certainly had a significant influence on the share prices of Canadian and US listed companies held within the Fund (and more broadly in share prices of companies operating in the renewable energy supply chain or those developing fuel cell technologies, for example) by triggering heavy buying volumes in a relatively short space of time.

As noted in recent commentary, new capital received by the Fund has been deployed into better value prospects listed in the UK, which include a number of Initial Public Offerings – most recently Victory Hill Global Sustainable Energy Opportunities – as part of a rotation away from US and Canadian yield cos.

Since the end of Q3 2020, only a modest amount of capital has been invested in selective US and Canadian companies with the expectation that valuations will retrace to more sustainable levels in time and the Fund will be able to build back exposures to some of the long-standing, core US and Canadian yield co exposures within the portfolio at far more attractive prices with greater yield potential. The ETF inflows appeared to peak around the start of the year and a healthy correction in share prices has taken root in the near term.

Looking forward, February will see many companies reporting full year and Q4 2020 results. Asset valuations for the UK-centric renewables companies are keenly sensitive to long-term power price forecasts while in the immediacy cash flows are, to varying degrees, influenced by prevailing pricing dynamics. Following a strong rebound in UK power prices generally – from day-ahead prices through to futures prices a few years out – we anticipate the cessation in the headwind from electricity price expectations to have persisted through Q4 2020 and there is a possibility that asset valuations may start to inflect even though longer-term price forecasts (10 years or more into the future) may remain soft.
