

VT MUNRO SMART-BETA UK FUND

Factsheet 213: May 2025

Fund Objective

The Fund seeks to maximize the overall return by seeking to replicate the performance of the Elston Smart-Beta UK Dividend Index¹. It is a UCITS fund.

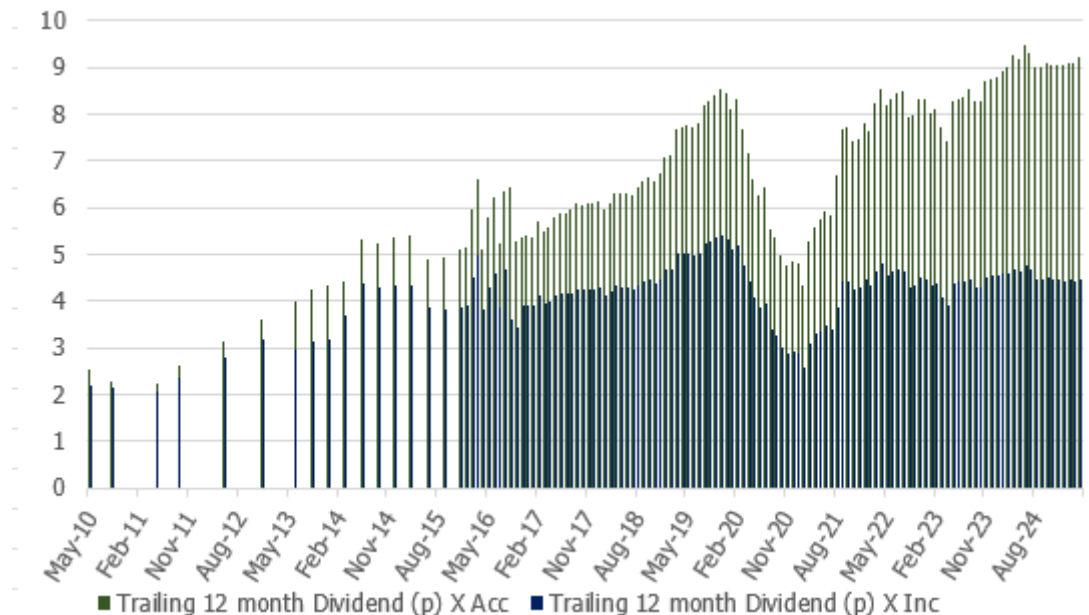

Fund Process

The VT Munro Smart-Beta UK Fund will seek to deliver a consistent return over the long term by holding mainly large and medium sized securities, listed on the London Stock Exchange. The Fund will be constructed on the basis of the underlying fundamental financial attributes of the companies listed on the London Stock Exchange rather than solely on their market capitalisation. The weight of each company in the Fund will be determined by the proportion that its forecast total dividend will be expected to make of the total income of all the companies held. The Fund distributes every month and can be considered to be managed with the aim of replicating the performance of the Elston Smart-Beta UK Dividend Index which is constructed on the same basis.

Market comment (as at 30/04/2025)

The forecast for dividends to be paid by the largest UK companies next year decreased over the month from £98.2bn to £95.9bn. The forecast decrease is largely coming from reductions in the forecast payouts for Shell, HSBC Holdings, Rio Tinto and Glencore. The companies seeing the largest increase in their forecast payouts are BP, Fresnillo and GSK.

¹The Elston Smart-Beta UK Dividend index is a Sterling based total return index, comprising approximately 200 of the largest dividend paying stocks (excluding Investment Trusts) that are quoted on the London Stock Exchange. While the full universe is initially determined by market capitalisation, the investible universe is reweighted based on expected dividend payout. The Fund aims to replicate the performance of the Elston Smart-Beta UK Dividend index but will not necessarily be invested in all the constituents. The index construction is described in detail [here](#).
